

## Assignment 4

The screenshot shows the AWS Management Console home page for a user in the us-east-1 region. The top navigation bar includes the AWS logo, a search bar, and various service icons. Below the navigation bar, there are two main sections: "Build a solution" and "Trusted Advisor".

**Build a solution** section:

- Launch a virtual machine (With EC2 (2 mins))
- Start a development project (With CodeStar (5 mins))
- Connect an IoT device (With AWS IoT (5 mins))
- Build using virtual servers (With Lightsail (2 mins))
- Host a static web app (With AWS Amplify Console (2 mins))
- Register a domain (With Route 53 (3 mins))
- Build a web app (With AWS App Runner (5 mins))
- Deploy a serverless microservice (With API Gateway (2 mins))
- Start migrating to AWS (With AWS MGN (2 mins))

**Trusted Advisor** section:

No recommendations

This could be because you have not run Trusted Advisor checks, or you don't have AWS Business or AWS Enterprise support plans.

Go to Trusted Advisor

The screenshot shows the AWS Amplify console for the "Calculator.github.io" app. The left sidebar contains the "AWS Amplify" header and a list of settings: All apps, Calculator.github.io, App settings, General, Amplify Studio settings, Domain management, Build settings, Previews, Notifications, Environment variables, Access control, Monitoring, Rewrites and redirects, Custom headers, Documentation, and Support.

The main content area displays the app's homepage, "Calculator.github.io". It includes a section for "Hosting environments" and "Backend environments". The "main" branch is selected, showing "Continuous deploys set up (Edit)".

The deployment pipeline is shown as a sequence of steps: Provision, Build, Deploy, and Verify, all of which are completed (indicated by green checkmarks).

Below the pipeline, there is a table with deployment details:

Last deployment	Last commit	Previews
5/23/2022, 11:49:03 PM	This is an autogenerated message   Auto-build   GitHub - main	Disabled
